Revision history

October 31, 1993

Standard, release 1.0. This is a new document for X11 release 19.

December 1994

Standard, release 2.0. Reissued to include editorial changes and indexing. Because of the extent of the changes, revision bars are not used.

December 1995

Standard, release 3.00. Reissued to include the option 81C system. Revision bars are used to indicate changes.

Contents

Introduction	1
Defining the Clock Controller	2
Why networks use Clock Controllers	2
Synchronization methods	3
Hierarchical synchronization	3
Frame slip	5
Determining network configuration	5
Other documents	8
Clock Controller operation	9
Clock operation	9
Tracking mode	9
Free run (nontracking) mode	9
Holdover mode	10
Reference clock errors	10
Automatic clock recovery	12
Automatic clock switching	12
Clock Controller installation	13
Determining slots and shelves	14
Replacing a Clock Controller	18
Installing a Clock Controller	18
Starting the Clock Controller	18
Clock Controller commands	19
Installing the Clock Controller in a single group	22

Cabling requirements	26
NT8D74 Clock Controller to InterGroup cable	26
NT8D75 Clock Controller to Clock Controller cable	26
NT8D79 PRI/DTI to Clock Controller cable	27

List of figures

Figure 1	
Master/slave relationship	6
Figure 2	
Master/slave with a secondary clock source	6
Figure 3	
Star clocking arrangement	7
Figure 4	
Clock Controller primary and secondary tracking	11

List of tables

Table 1	
Node accuracy and parameters	4
